

PRESS RELEASE

Troptions Launches the Troptions Global Yield System in Partnership with Global Business Development Solutions, Inc.

FOR IMMEDIATE RELEASE

Boca Raton, FL — 11-20-2025

Troptions Corporation today announced the launch of an innovative, utility-driven financial product: the Troptions Global Yield System, a breakthrough investment structure designed in partnership with Global Business Development Solutions, Inc. (GBDS). This initiative marks a historic moment in digital-asset evolution—one where cryptocurrency transitions from speculation to real-world financial performance.

For years, Troptions has stood as one of the earliest and longest-operating digital assets. Now, with the introduction of this new yield system, Troptions steps fully into the meaning of its original name: “Trade Options.” By providing a structured, collateral-backed yield solution, the Troptions Global Yield System creates a safe, purpose-driven bridge between traditional finance and digital asset utility.

The newly structured system will allow GBDS to expand its investment suite, offering institutional and qualified private clients access to a fixed-yield, fixed-term financial product powered by Troptions AUS digital collateral. This realignment of digital assets toward measurable, high-integrity performance sets a new global standard for responsible crypto-based financial innovation.

A New Era: Turning Crypto Into Something Real

The Troptions Global Yield System introduces a new category of digital-asset utility—bringing trust, stability, transparency, and tangible economic value back into the crypto conversation. Rather than operating as a speculative token, Troptions AUS now acts as a collateral reserve supporting real market activity through GBDS’s trading ecosystem.

This partnership delivers what the digital asset world has been missing:

- A real financial use case
- A risk-managed trading structure
- A regulated-style framework
- A yield system grounded in verifiable performance
- A bridge between blockchain credibility and traditional finance discipline

Ryan Carter, Chief Operating Officer of Troptions Corporation, emphasized the importance of this milestone:

“Troptions is the oldest living cryptocurrency, and we’ve seen everything—the hype, the failures, the broken promises. Garland created Troptions so people could trust crypto and take less risk, and this new product finally delivers on that original blueprint. For the first time, Troptions becomes exactly what it was meant to be: a real Trade Option.”

A Milestone for the Digital Asset World

The release of the Troptions Global Yield System transforms Troptions from a legacy token into a real financial instrument, operating with institutional-grade oversight, reporting, and collateral protocols. By integrating it into the GBDS yield platform, Troptions becomes the first cryptocurrency to mature into a collateralized fixed-yield product.

This breakthrough creates opportunities for family offices, institutional funds, private investors, and global financial partners seeking safe, transparent, yield-supported entry into digital assets.

About Troptions Corporation

Troptions is one of the world’s earliest crypto tokens, founded by Garland Harris with a mission to offer safer, trust-based alternatives to early blockchain speculation. Troptions now supports real-world financial yield systems and multi-sector economic growth.

About Global Business Development Solutions, Inc. (GBDS)

GBDS is a U.S.-based financial development firm specializing in trade systems, institutional investment structures, and advanced yield programs. Through disciplined controls and proprietary trading technology, GBDS delivers consistent, risk-managed financial performance to qualified investors worldwide.
